FOR A COMMERCIAL ENERGY AUDIT.

ANNUAL MEETING

WITH THE SUMMER MONTHS UPON US, NOW IS THE PERFECT TIME TO CHANGE YOUR AIR FILTER. VISIT FILTERASY.

COM/GREYSTONE TO LEARN HOW YOU CAN HAVE YOUR FILTERS DELIVERED DIRECTLY TO YOUR DOOR.

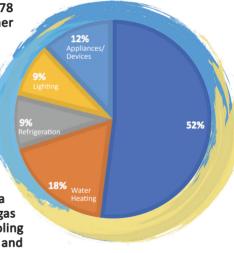

KEEPING COOL IN SUMMER HEAT

Summer cooling, followed by water heating, typically uses the majority of energy in your home, and makes the biggest impact on your energy bill. Summer air-conditioning use can increase your energy bill significantly, especially when temps stay 90 degrees and above for extended periods of time.

Weather can play a large role in how hard your cooling system operates. The hotter it is, the more

system operates. The notter it is, your system runs. A setting of 78 degrees or higher in the summer is recommended. Each degree setting lower in summer can result in 3 to 5 percent more in energy costs. However, this year's high summer temps are bound to result in higher bills.

How can you keep your electric bill manageable? Think of your cooling system as you would your car. Just as a tuneup for your car improves gas mileage, a tuneup for your cooling system can improve efficiency and comfort.

Another way to save on energy costs is by changing dirty air filters. Dirty or stopped up filters will cause your cooling system to use significantly more energy. They will also decrease the comfort level of your home. GreyStone members can have filters delivered directly to their homes by signing up for FilterEasy at *filtereasy.com/greystone*. Your first filter is free, courtesy of GreyStone.

Also, you can help beat the peak by reducing energy use from 3 - 8 p.m. By waiting to use large appliances, turning off lights and keeping your thermostat up a few degrees you can keep the energy load lower.
