BRING ON THE NEW YEAR!

Welcome to *Energizing Your Life*, a new communication you will receive every month as a member and owner of GreyStone Power. Check *Energizing Your Life* for information from the co-op you own!

2017 will be a great year! Collectively, you will continue to receive Wallet Watch discounts on your bills to the tune of an estimated \$21 million over the year. Also, in October you will receive your usual capital returns check. Did you know, **if you were a Georgia Power customer, you would pay 30 percent more for your electricity**, according to the most recent survey by the Georgia Public Service Commission?

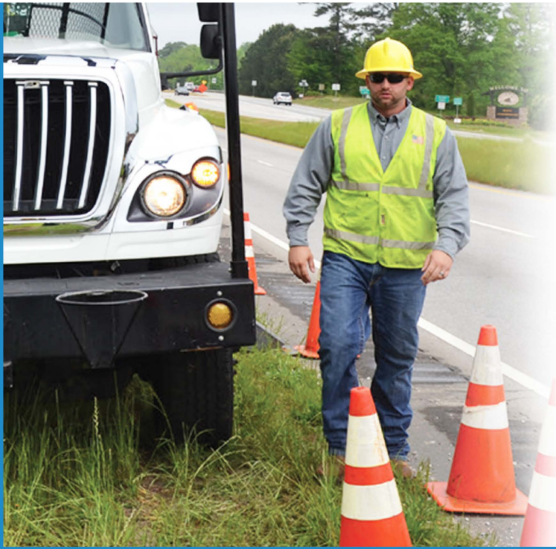

As a GreyStone member, you own the fourth largest electric cooperative in the state based on number of members, and the 19th largest in the U.S. based on meter count. GreyStone maintains 6,882 miles of line, and still growing. You have 251 employees working for you.

GreyStone covers 566 square miles of territory in eight counties west of Atlanta. Your home or business is powered by electricity generated 63 percent by natural gas, 25 percent by nuclear, 9 percent by coal, and 3 percent by renewables like solar.

Your co-op began in 1936 when a handful of local citizens went door-to-door to encourage residents to pay \$5 to become a member of this electric cooperative. Known as "the electric," it was a force that would forever change their lives. On Saturday, Oct. 14, 2017, we will celebrate our 80th Annual Meeting together at GreyStone. What a track record of success, thanks to you! **Happy New Year!**

Avoid a close encounter...

Move Over for Linemen!

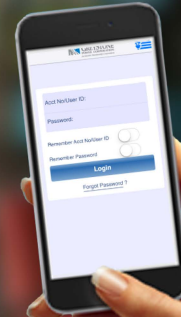

Motorists must change lanes or drop their speed to avoid utility workers, or be fined \$250 per incident.

Move Over. It's the Law.

With the **GreyStone Power app**, you can access your account from anywhere.

View your balance, pay your bill, check usage and **so much more!**

Download it today at www.greystonepower.com/mobileapps.

Protect your family by using generators safely

- Gasoline-powered generators produce carbon monoxide. Fumes can be deadly without adequate ventilation. Never run your generator indoors or in your garage.
- Use heavy duty, properly grounded extension cords that are not frayed or worn to plug appliances into the generator.
- Use a generator only when necessary. Turn it off while sleeping or away from home.

- Do not exceed recommended wattage load.
- Do not connect a generator directly to main fuse box or circuit panel.
- Never plug a generator into any part of the house, causing backfeed into outside power lines. This can result in injury or death to GreyStone workers or others.
- Read manufacturer's instructions carefully! Follow recommendations.
