INNOVATING FOR GROWTH

GreyStone actively engages in economic development initiatives to support the growth of the region. We work closely with local governments, economic development agencies, real estate professionals and site selection consultants to attract new businesses and expand existing ones.

In coordinating with every part of the organization, GreyStone is in the position to assist businesses in making informed decisions about locating or expanding their operations in west Georgia. As large businesses join our lines, there are multiple benefits to our residential members.

Increased power sales create economies of scale, leading to better rates for all members. Additionally, revenue from property taxes generated by new businesses bolsters the local economy. Job creation offers valuable employment opportunities for local workers, while investments in distribution infrastructure guarantee reliable power delivery. Furthermore, enhanced efficiency at generating plants helps to lower operational costs.

Our team has been working hard over the past year on some exciting opportunities to serve large commercial and industrial businesses. We are thrilled to work with The Preserve, which is a proposed 1,100-acre wellness resort and development in Douglas County that will include commercial, retail, residential and farm space. In addition, we are powering Project Hammer, a 2 megawatt pharmaceutical distribution center on the Bright Star Connector in Douglasville. The project is expected to bring a \$177 million investment in land and equipment and 202 jobs.

GreyStone is a key driver of West Georgia's economic growth. By fostering strong partnerships, providing essential information and attracting large-scale businesses, GreyStone is ensuring a brighter future for the region.

Message and data rates may apply. For members who wish to opt out of our texting service, text STOP to 81492 to opt out.

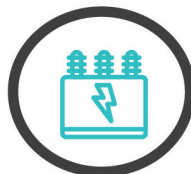

The Steps to Restoring Power

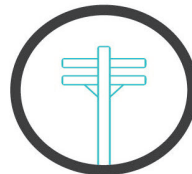

When a major outage occurs, our crews restore service to the greatest number of people in the shortest time possible – until everyone has power.

1. High-Voltage Transmission Lines
These lines carry large amounts of electricity. They rarely fail but must be repaired first.

2. Distribution Substations
Crews inspect substations, which can serve hundreds or thousands of people.

3. Main Distribution Lines
Main lines serve essential facilities like hospitals and larger communities.

4. Individual Homes and Businesses
After main line repairs are complete, we repair lines that serve individual homes and businesses.
